

Suitable power cable for your country included

High Power it 2

Grounded, high performance power supply for Pro-Ject 15V DC turntables

MSRP 34,90 € (incl. VAT)

- 3 pin DC power supply with ground connection
- Proper grounding for your turntable
- Dramatically reduces grounding hum
- Solution for humming floating mass systems
- Delivers cleaner current and more power
- Compatible with all 15V DC Pro-Ject turntables

Input:	100-240V AC, 47-63Hz
Output:	15V DC, 1.5A
Diameter DC plug:	2.1 mm
Dimensions:	92 x 45 x 32 mm
Weight:	140 g (w/o power cord)
*power cord suitable for your country included	
Certifications:	CE, CB, UKCA, UL, FCC, GS, SAA, RCM, PSE
Not available in Taiwan and South Korea!	

Every turntable needs proper grounding, otherwise electrical hum may be induced. If a turntable is not properly grounded, it may have a different reference potential than the connected amplifier. Consequently, these potential differences induce a compensating current which can be heard as hum.

Therefore, all good turntables have a separate ground cable which can be connected to standard amplifiers or phono stages, which usually have a ground terminal. This way different potentials are equalized and hum is no longer audible.

However, many modern amps, especially most amps of soundbars or streaming speakers have no ground connection. These systems are referenced as "floating mass systems". If a standard turntable is connected to such a „floating mass" amplifier, audible hum will be the result.

Therefore, we designed the High Power it 2 power supply. The High Power it 2 is a three pin power supply with ground connection for Pro-Ject turntables to get rid of these ground related hum problems, especially occurring with amplifiers with „floating mass", which have no real ground connection.

Moreover, the High Power it 2 delivers cleaner current and more power for all Pro-Ject 15V DC turntables.

Example for possible setup with floating ground:
